## LORIEN EXPANDS INTO CENTRAL EUROPE

Lorien Engineering Solutions' continuing international success has been boosted by the creation of a Central European base in Poland.

Lorien Engineering Polska is based in the historic city of Wroclaw in the South-West of Poland. From there we are strongly positioned to develop our existing presence in the country's food, brewing and healthcare sectors, and the office acts as a Central European hub for our many international clients who have a growing presence in the region.

Andrew Mieleniewski will be leading the Polish venture. He says: *"This is a real milestone for the company, and one which I'm confident will be a success. I have worked within our international team for several years now, and we have established a wealth of experience working on projects in Poland and many Central and Eastern European countries, so we already have a very strong foundation to build on. We are all very excited about our new permanent base in Poland."*

If you have business interests in Poland or the Central European region, we would be pleased to talk to you.

**Contact information in Poland:**

Andrew Mieleniewski, General Manager  
Agnieszka Gierlak, Office Manager  
Artur Antoniuk, Business Development Manager

# lorien engineering news update

## Duncan's efforts boost PepsiCo project

Lorien senior packaging project engineer Duncan Johnstone has been named 'most influential member of the team' on PepsiCo's Bursom Boost project in Leicester. Duncan played a pivotal role in the capacity increase project, enhancing an existing line which produces family favourites including Wotsits, Chipsticks and Frazzles.

Stephen Brown, Duncan's line manager at Lorien, said: "It's great to see Duncan rewarded for his work and commitment on the Boost Project. Duncan's a very dedicated engineer and he's definitely set the benchmark for future PepsiCo projects."

## Sudbury Hall... one year on

A landmark energy saving project completed by Lorien Engineering Solutions on behalf of the National Trust has lowered carbon emissions by 80%. One year on since Sudbury Hall in Derbyshire became one of the first National Trust historic houses to be powered by small-scale renewable energy through a green energy partnership with npower, its annual carbon emissions have dropped from over 52 tonnes to under 12 tonnes.

Lorien was responsible for carrying out a full sustainable options analysis followed by the design and project management for the installation of the boilers. Lorien director Steve Turner said: "We are delighted to have delivered a truly sustainable project which has generated reductions in carbon emissions on a grand scale, in line with our predictions at feasibility study stage."

## A good Drinktec for Lorien

The Drinktec 09 exhibition in Munich in September proved to be a very useful event for Lorien and we would like to thank all the visitors to our stand for making the event such a success. The show was a perfect opportunity for our clients and other business contacts to come and meet with Lorien colleagues from our UK and Polish offices, as well as an opportunity for Lorien people to meet with our supplier base in the drinks industry. David Scholes (Brewing Business Development Manager) commented that having a focal point to meet with clients and suppliers worked well, and that it was good to see that so many in the industry still appreciate the social side of brewing!

## And finally...

Lorien was delighted to make it to the final 10 of the National Business Award for Growth Strategy. Although we weren't chosen as the overall winner, we beat off stiff competition to make the shortlist.
